Our understanding of science and health is transformed by research.

The research community is well trained, diverse and inclusive.

Research is carried out to the highest appropriate standards.

Discoveries are translated into new health interventions.

Interventions improve the health of many people.

People are aware of, engaged with, and understand science and health research.

Health is improved through changes in policy and practice.

People have trust in Wellcome, and in science and health research.

Maximise the potential of research to improve health.

Deliver innovations that prevent or treat health problems.

Engage society to shape choices that lead to better health.

To improve health for everyone by helping great ideas to thrive.
